

Frequently Asked Questions

Trouble signing in?

Stripe Dashboard users

Your username is the email address used to register the account. [Reset your password](#) if needed and complete two-step authentication if required.

Forgot username?

Your Stripe account username is the email address you used to register. If you're not sure which email address you used, search your inboxes for previous Stripe emails to confirm.

Need to update your email address?

See [Change the email address where Stripe emails are sent](#).

Forgot password?

[Reset your password](#) if needed. You'll receive a confirmation email once your password is reset.

Can't complete two-step authentication?

Lost your phone, changed your phone number, or having problems with SMS? Follow [this troubleshooting guide](#).

Try [authenticating with your backup code or removing two-step authentication](#).

Express dashboard users

Refer to our [Express login support page](#).

Custom dashboard users

This means your business is connected to a platform that uses Stripe to process payments, but that platform fully controls your account and dashboard experience.

Use that platform to access your account dashboard.

If you require any support with your dashboard or Stripe account, reach out to your platform directly.

Waiting on your first Stripe payout? What you need to know

There is a 7-14 day waiting period for the first payout. This delay is necessary for risk mitigation and *cannot be waived under any circumstances*.

Any updates made to your payout method or schedule during this time will take effect after the waiting period has ended. Check your estimated payout schedule in the [Dashboard](#).

Delays more than 7-14 days

The waiting period is typically 7 days, but your first payout might take longer, depending on your industry risk level and country of operation. The waiting period can be up to 14 days for businesses in certain industries and up to 30 days in countries such as Brazil. See a [full list of payout schedules by country](#).

If you haven't received your first payout after the designated waiting period see: [Where is my payout? FAQ for missing and late payouts](#).

Other reasons for delay

Bank related delays - Bank processing can be delayed by weekends and holidays. Once the bank has finished processing your payout, the funds will be deposited into your account automatically.

Account verification issues - Check your account status in the [Dashboard](#) or your email to see if additional information is required to verify your account. You can also check which bank account is linked to your Stripe account.

Add a bank account for payouts

To receive payouts, you must have a bank account linked to your Stripe account through the Business Settings page in the Dashboard. Only users with Admin or Owner permissions can add, edit, or delete bank account details.

To receive payouts from Stripe, you must have a bank account linked to your Stripe account.

To add a bank account

From the [Dashboard](#), click the Settings gear in the upper-right corner of the page. Under Account Settings, click Business, then select the Bank accounts and currencies tab.

Under Settlement currencies and bank accounts, find the currency you use for payouts and click Add a bank account. If you have more than one currency enabled on your account, you'll need a bank account for each currency.

You may be asked to verify your credentials by sending a verification email, or entering your password.

Once verified, enter your bank account information. The bank account must be a checking account. Ensure the account number, routing number, and account holder name match your bank statement. The bank account currency must match the currency in your [payout settings](#).

Click Add bank account to save.

Additional Tips

To update existing bank account information, see [Update existing bank account information](#).

Can't complete two-step authentication?

Try authenticating with your [backup code](#) or removing two-step authentication from your account.

Lost your phone, changed your phone number, or having problems with SMS? [Follow this troubleshooting guide](#) or [update your phone number](#).

Authenticate with your backup code

[Sign in](#) using your email address and password.

When prompted to complete two-step authentication, click Sign in another way.

Follow the prompts to sign in using your backup code. This will disable two-step authentication.

Remove two-step authentication

Don't have your backup code and still can't complete two-step authentication? Follow these steps to remove two-step authentication from your account.

If you're the account owner:

Submit an [account recovery form](#). Provide detailed information to confirm your identity for security purposes.

Stripe confirms your identity and removes two-step authentication from your account.

[Sign in](#) using your email address and password.

If you're not the account owner:

The account's primary owner or administrator resets your account's two-step authentication on the [Team and security page](#).

You receive an email with a link to regain access to your account.

[Sign in](#) using your email address and password.

Charge you don't recognize from Stripe?

This FAQ is for customers of businesses that use Stripe.

If your bank statement has a charge from Stripe that you don't recognize, it may be from a business using Stripe's payment processing services. Use our secure [charge lookup tool](#) to identify the business. Contact the business directly or reach out to your bank if you need a refund or suspect fraudulent activity. Stripe cannot issue refunds on behalf of the business.

Stripe is a payments processor that works with businesses to help them accept payments through their websites, apps, and in store. If you see a charge from "STRIPE" on your credit card statement, it's likely you purchased something from a business that

uses our services and the business name isn't reflected in the bank statement descriptor. Use the secure [charge lookup tool](#) to identify the business.

If you don't recognize the business name or want a refund, reach out to the business directly. Stripe is unable to issue [refunds](#) on their behalf.

If you can't get in touch with the business, they're unresponsive, or you believe the business might be fraudulent, reach out to your bank. They should have recommendations for how to proceed, such as [opening a dispute](#).

How to handle disputes

Each card network has its own process to handle disputes between cardholders and merchants. Merchants can challenge the dispute, providing evidence to the card issuer, or accept the dispute. If the merchant challenges the dispute, the card issuer makes a final decision based on the provided evidence.

Each card network has its own process for handling disputes between cardholders and merchants, but at a high level they're all similar. Learn more about [how disputes work](#).

When a customer files a dispute, the disputed amount plus the dispute fee is immediately pulled from your Stripe balance until the card network reaches a decision. Stripe plays no part in the dispute decision itself, but does provide tools to help you challenge the dispute to give you the best chance of winning. Learn [how to manage disputes in the Dashboard](#).

Receiving a dispute

When you receive a dispute, you have to decide if you want to challenge it. Review the dispute and the dispute claim in the Dashboard to decide if you think the dispute is valid. You also need to assess if you have evidence to counter the dispute. If you

choose not to challenge it, you can ignore the dispute and do nothing, or [explicitly accept the dispute](#). If you want to win a dispute, you must challenge it and submit evidence. Taking no action is treated as accepting the dispute.

Submitting evidence for a dispute

In the Dashboard, you'll be given a timeline on when evidence should be submitted. After you decide to counter the dispute, you need to gather and submit your evidence within that timeline

There are several different [types of evidence](#) that you can present to counter the dispute. For example, a payment disputed for the reason "Product not received" can be countered with evidence of delivery by the customer signing for the goods. Read more about [dispute categories and reason codes](#) and [different types of evidence](#) that can help fight each type of dispute.

Follow our [best practices](#) on what kind of evidence to submit for different kinds of disputes and how to organize evidence. You have just one opportunity to submit evidence, so it's important to gather everything you need before submitting, since you can't go back and add evidence once you've submitted.

The evidence you provide the issuer is the only communication between you and the issuer. Based on the evidence you give, the issuer will make a single, final decision about whether the dispute is won or lost.

Prevent disputes

The best way to deal with disputes is to prevent them from occurring in the first place. Learning from past disputes can help prevent future disputes. Read about Stripe's [best practices for preventing disputes](#).

Inquiries

You may receive an inquiry about a payment from a customer. An inquiry is a preliminary phase during which a card network gathers information before deciding to open a formal dispute. Follow our [recommendations on how to handle inquiries](#) to reduce the likelihood of it becoming a dispute.

Activate a new payment method

Enable or manage payment methods from the [Payments settings](#) in your Dashboard. Depending on the integration, you may need to complete additional steps to accept the payment method.

Alternatively, if you use the Hosted Invoice Page, you may need to enable payment methods on the Invoicing settings page.

View a list of available local payment methods that you can accept in your [Payment methods settings](#). From the Dashboard, click the Settings gear icon in the upper-right corner of the page, then under Product settings, click Payments, then select the Payment methods tab.

Click Turn on next to each payment method you want to accept. Depending on the payment method, you may be prompted to provide additional information required by the scheme.

Once turned on, most payment methods will show as Active immediately, while a select few may temporarily show Pending.

Depending on your Stripe integration, you may need to take additional steps to start accepting that payment method on your site. We recommend using a hosted integration like [Checkout](#) so the payment method is available right away, without any code changes.

Managing payment methods for the Hosted Invoice Page

If you use the [Hosted Invoice Page](#), set the payment methods that you want to accept for invoices from the Invoicing settings page.

To set payment methods for invoices:

From Settings, under Product settings, click Billing, then click the [Invoices](#) tab.

Scroll down to Default payment methods. From here, you can change the Payment method configuration using the selector.

If you need to create a new configuration, click Edit payment methods to go to Payment settings.

Click the Create configuration button, give the configuration a name, and click Save configuration. Turn on the payment methods you want to activate.

Once the new configuration is completed, return to [Invoicing settings](#) and select the new configuration.

Click Save.

You can also edit which payment methods you want to accept for a specific invoice from the Invoices and Subscriptions editors.

How to refund a customer

You can refund non-disputed payments to customers directly from the Payments overview page in the Dashboard or using the Stripe API. The default refund amount is the full charge amount, but you can adjust the amount to give a partial refund.

Refund [non-disputed payments](#) to your customers using the Stripe API or directly from the Dashboard--see instructions below for both methods. Refunds take 5-10 days to process and appear on the customer's account. Because of the limited window to cancel a refund, we recommend using test mode to try out the process if needed--see below for more information.

From the Dashboard

Find the charge to be refunded in the [Payments overview](#) page.

Click the  icon to the right of the charge and select Refund payment. Alternatively, click on the charge and click the Refund button on the top right corner of the payment page.

The default refund is for the full amount. For a partial refund, enter a different amount to be refunded.

Select a reason for the refund. If you select Other, you must provide an explanatory note that is attached to the refund.

Click Refund.

Using the Stripe API

Create a [create_refund](#) call in the API.

In the API call, include the [charge ID](#) to refund.

To refund an amount different than the full charge amount, include the [amount parameter](#) and enter the amount to refund. If no amount is entered, the default action will be a refund of the full charge amount.

Run the API call.

Use test mode to try out the refund process

Once you've initiated a refund, you have a very limited window to [cancel](#). You can use test mode to try out the process beforehand. To enter test mode from the account picker in the upper left corner of the Dashboard: select **Switch to sandbox** then click **Test mode**. Once in test mode, you can try creating refunds before actioning on the live charges. Actions taken in test mode use the test API key, which means no real transactions are processed, not changes made to your actual customers. Learn more about [test mode and sandboxes](#).

Change the owner of a Stripe account

The current owner of a Stripe account can transfer ownership to someone else by transferring to an existing Super Administrator or Administrator, or to a new individual. In Brazil, ownership transfer is not allowed for individual or sole proprietorship accounts. If the current owner is no longer with the company or the Super Administrator account is inaccessible, contact your Platform for assistance and provide the necessary documentation and authorization.

The current owner of a Stripe account can transfer ownership to someone else, depending on the user's existing account access and permissions. They might need to transfer ownership if someone is leaving their organization, or if the responsibility of Stripe account ownership is shifting.

For Stripe accounts in Brazil, the transfer of ownership is not allowed in case of individual or sole proprietorship accounts (linked to a CPF). Learn more about [updating tax information in Brazil](#).

How to transfer account ownership

To an existing user

Go to your [Team settings](#) on the Dashboard.

Locate the user you want to make the new account owner and click the overflow menu.

The next steps depend on whether the user is already a Super Administrator or Administrator.

If they are: From the popup, choose the option to Transfer ownership to this user.

If they are an Administrator of the account, they become a Super Administrator after the ownership transfer.

If they are not:

- Set their role to Super Administrator and click Save.

- Click the overflow menu again for the same user and from the popup, select Transfer ownership and follow the instructions.

To a new individual

Go to [Team settings](#) on the Dashboard .

Click +New Member.

Add the new user's email address and set their role to Super Administrator.

Click Save to send them an invitation to join the account.

After the new user has accepted the invite, go back to [Team settings](#).

Click the overflow menu next to their name.

From the popup, select Transfer ownership and follow the instructions.

What if the current account owner is no longer with the company?

Only the current owner of a Stripe account can transfer ownership. If that person is no longer with the company, reach out to Stripe Support.

What should I do if the Super Administrator account is inaccessible?

What you should do depends on if the Company Representative:

Wants to transfer ownership to another user: We'll need to call the Company Representative to verify their personally identifiable information (PII) and get their authorization to transfer ownership.

Is not available: We will need a letter from a company signatory, which confirms and details the change of Company Representative and the transfer of ownership of the Stripe account. We strongly recommend that the person who holds the title of Company Representative is also the person who controls the Super Administrator login for the Stripe account.

The letter should be on your company's letterhead and authorize the appointment of the new Company Representative, as well as the transfer of ownership to a specified user. Please include the following information:

- Business name

- Business tax ID

- Business address

- Previous Company Representative's name and date of birth if available

- New Company Representative's name and date of birth

- New Super Administrator's email address that they'll use to log into Stripe

We ask that the signatory on this letter is not the same person who is being appointed as the new Company Representative. For example, if the CEO is being appointed as Company Representative, have a board member or other member of the C-suite sign and authorize the letter.

I only want to change the email address on my Stripe account. How do I do that?

Change the owner of a Stripe account

The current owner of a Stripe account can transfer ownership to someone else by transferring to an existing Super Administrator or Administrator, or to a new individual. In Brazil, ownership transfer is not allowed for individual or sole proprietorship accounts. If the current owner is no longer with the company or the Super Administrator account is inaccessible, contact your Platform for assistance and provide the necessary documentation and authorization.

The current owner of a Stripe account can transfer ownership to someone else, depending on the user's existing account access and permissions. They might need to transfer ownership if someone is leaving their organization, or if the responsibility of Stripe account ownership is shifting.

For Stripe accounts in Brazil, the transfer of ownership is not allowed in case of individual or sole proprietorship accounts (linked to a CPF).

How to transfer account ownership

To an existing user

Go to your [Team settings](#) on the Dashboard.

Locate the user you want to make the new account owner and click the overflow menu.

The next steps depend on whether the user is already a Super Administrator or Administrator.

If they are: From the popup, choose the option to Transfer ownership to this user.

If they are an Administrator of the account, they become a Super Administrator after the ownership transfer.
